

CONTROL VALVE
SERIES BR12B®

SESTO  **VALVES** | Advanced
Valves Solutions

version 12/2011

BR 12B - DIRECT CONTROL VALVE

Nominal dimensions

- DN 25 - DN 250
- 1" - 10"

Nominal pressure

- PN 10 - 400
- Class 150 - Class 2500

Construction

- single seat valve with option of balanced plug and multi-step reduction of pressure drop
- metal or soft seat

Working temperature range

- -180°C to +650°C

Flow characteristic, Kvs value

- linear, equipercantage
- Kvs: 10 - 800 [m³/h]

Tightness class (IEC 60534 - 4)

- class IV - standard
- class V - optional increased
- class VI - on request (special design)

Body material

- grey cast iron, ductile iron, carbon steel, stainless steel according to EN, DIN or ASTM

Plug and seat material

- stainless steel
- stellite or plasma nitridation possibility

End connection

- flanged
- welding

Actuators

- pneumatic with diaphragm
- electro-hydraulic
- electric
- hydraulic
- manual operated

USE

Single-ported globe control valves type BR12B are used in automatic and remote control installations as flow control elements to adjust flow of liquids, steam and gases. Wide range of materials, excellent pressure and temperature parameters, multiple design variants, meeting requirements of various processes make the valves applicable under the most demanding working conditions in power generation, petroleum chemistry, heating, chemical industry, metallurgy, etc.

FEATURES

- Various materials of valve body and internal parts, adapted to specific working conditions.
- Design provides noise reduction, enhanced resistance to cavitation and flashing, and elimination of choked flow.
- Wide range of nominal dimensions in from DN25 to DN250, for nominal pressures, PN10 to CL2500
- Wide flow ratio range and various control characteristics.
- Reduction in aggressive and toxic media emissions to environment by application of bellow seal bonnets or bonnet packings meeting requirements of TA - LUFT.
- Easy assembly and dismantling of valve internal parts for maintenance and service.
- High durability and reliability due to application of top-class materials and surface improvement processes (burnishing, stelling, heat treatment, CrN coating).
- Possibility of mating with reverse action P/R (column) and P1/R1 (cast yoke) multi-spring actuators, and changing the spring range without any extra parts (keeping the number of springs).
- Possibility of fitting actuators with side-mounted (P1/R1) or top-mounted (P/R) handwheel.
- Possibility of performing diagnostics of "valve - actuator" due to application of smart electro-pneumatic positioners.
- Wide range of electric actuators.
- Special designs option:
 - for oxygen
 - for liquid and gaseous fuels
 - for low temperature fluids (liquid oxygen, nitrogen etc.)
 - for acid gases containing H₂S
 - with heating jacket
 - for potentially explosive atmospheres as per ATEX Directive 94/9/EC - ATEX
- design and production process meet the requirements of Quality Management System ISO 9001 and Directive 97/23/EC, and regulations of AD2000 Merkblatt, designated for installation on pipelines.

BR 12B® – is a trademark registered by Patent Office.

DESIGN AND TECHNICAL SPECIFICATION

Valve body (1)	single-ported, cast
Nominal size:	DN25; 40; 50; 80; 100; 150; 200; 250
Nominal pressure:	PN10; 16; 25; 40; 63; 100; 160; 250; 320; 400 as per EN 1092-1:2010 CL150; CL300; CL600; CL900; CL1500; CL2500 as per EN 1759-1:2005
divided as follows:	DN25...250 PN10...110; CL150...CL600 DN25...150 CL900; PN160 DN25...100 PN250...400; CL1500...CL2500
End connections:	– flanged: as per table 1. – butt welding ends BW, as per Table 12 and 13 – socket welding ends SW, as per Table 14

Steel flanges CL150; CL300; CL600; CL900; CL1500; CL2500 are so designed that they can be assembled with flanges as per American standards ANSI/ASME B16.5 and MSS SP44. In American standards flanges are identified with nominal values in "Classes", to which nominal pressure (PN) values as per PN-ISO 7005-1:2002 correspond.

Equivalent identifications as per PN are:

CL150: PN 20	CL300: PN 50	CL600: PN 110
CL900: PN 150	CL1500: PN 260	CL2500: PN 420

Table 1. - Flanged end connections

Nominal pressure	Facing of flange types			
	Raised face	Groove	Recess	Ring - joint
	Identification			
PN10; 16; 25; 40; 63; 100; 160; 250; 320; 400	B ³⁾	D ¹⁾	F ¹⁾	-
CL150, 300	B ³⁾	DL (D1 ²⁾)	F (F1 ¹⁾)	J (RTJ)
CL600; 900; 1500; 2500	B ³⁾ (RF)	DL (GF)	F (FF)	J (RTJ)
¹⁾ - up to PN 160 ²⁾ - only for CL300 ³⁾ - B1, Ra=12,5µm, concentric surface structure "C", B2 – (Ra as agreed with the customer) (xxx) - identification of connections as per ASME B16.5				
Possible execution of flanges per specification and indicated standards.				

- Construction length:**
- flanged valves as per PN-EN 60534-3-1; PN-M-74005; ISA S75.16-1993 Fig. 5; Table 9; 10
 - welding ends valves; Fig. 5; Tab. 11
 - as per PN-EN 60534-3-3: for PN 10...100 and CL150...600
 - as for flanged valves PN 160: for PN 160 and CL900
 - as for flanged valves PN 400: for PN 250...400 and CL1500...2500
- Materials:**
- as per Table 2; Relationship between working pressure and temperature as per Table 3.1 - 3.7
- Bonnet (2):**
- standard • extended • bellows (PN10...40; CL150...300)
- Plug (3a, b, c):**
- type: piston, sleeve guided, hard. Rangeability 50:1
 - variants: unbalanced
balanced (from DN40 / Kvs25)
balanced with pilot (DN50 / Kvs40)
 - flow characteristics: equal percentage - P
linear - L
- Seat (4):**
- fitted-in and sealed with body, hard (tight seat after consulting the manufacturer)
- Plug stem (5):**
- burnished, polished sealing face
- Control cage (6A):**
- perforated element executing preset flow characteristics and fixing the seat.
- Choke cage (6B, C):**
- perforated valve seat fixture, causing reduction in pressure drop between seat and plug.
- Body gasket (7), Seat gasket (8) and Control cage gasket (9):**
- spiral, graphite+1.4404 in all executions.
- Stem packing (9):**
- PTFE-V packing, compressed with spring bolt (Fig. 1e - item no 17)
 - ring gaskets formed in braided packing cords (PTFE +GRAPHITE)
 - graphite kits (expanded and silky graphite) or gaskets formed in braided graphite cords
 - TA-LUFT sealing with PTFE-V packing kit or graphite kit; packing structure as per Fig. 1 and 2, range of applications as per Table 3
- Leakage class:**
- basic: (class IV) less than 0,01% Kvs
 - enhanced: (class V) $3 \cdot 10^{-4} \cdot D \cdot \Delta p$ [cm³/min]
- where D (mm) - is seat diameter as per Table 5, Δp [MPa] – actual pressure drop in closed valve.
- Fluid flow direction:** Under the plug for valves as per Fig. 1a and 1b, over the plug for valves as per Fig. 1 c
- Flow coefficients:**
- as per Table 4

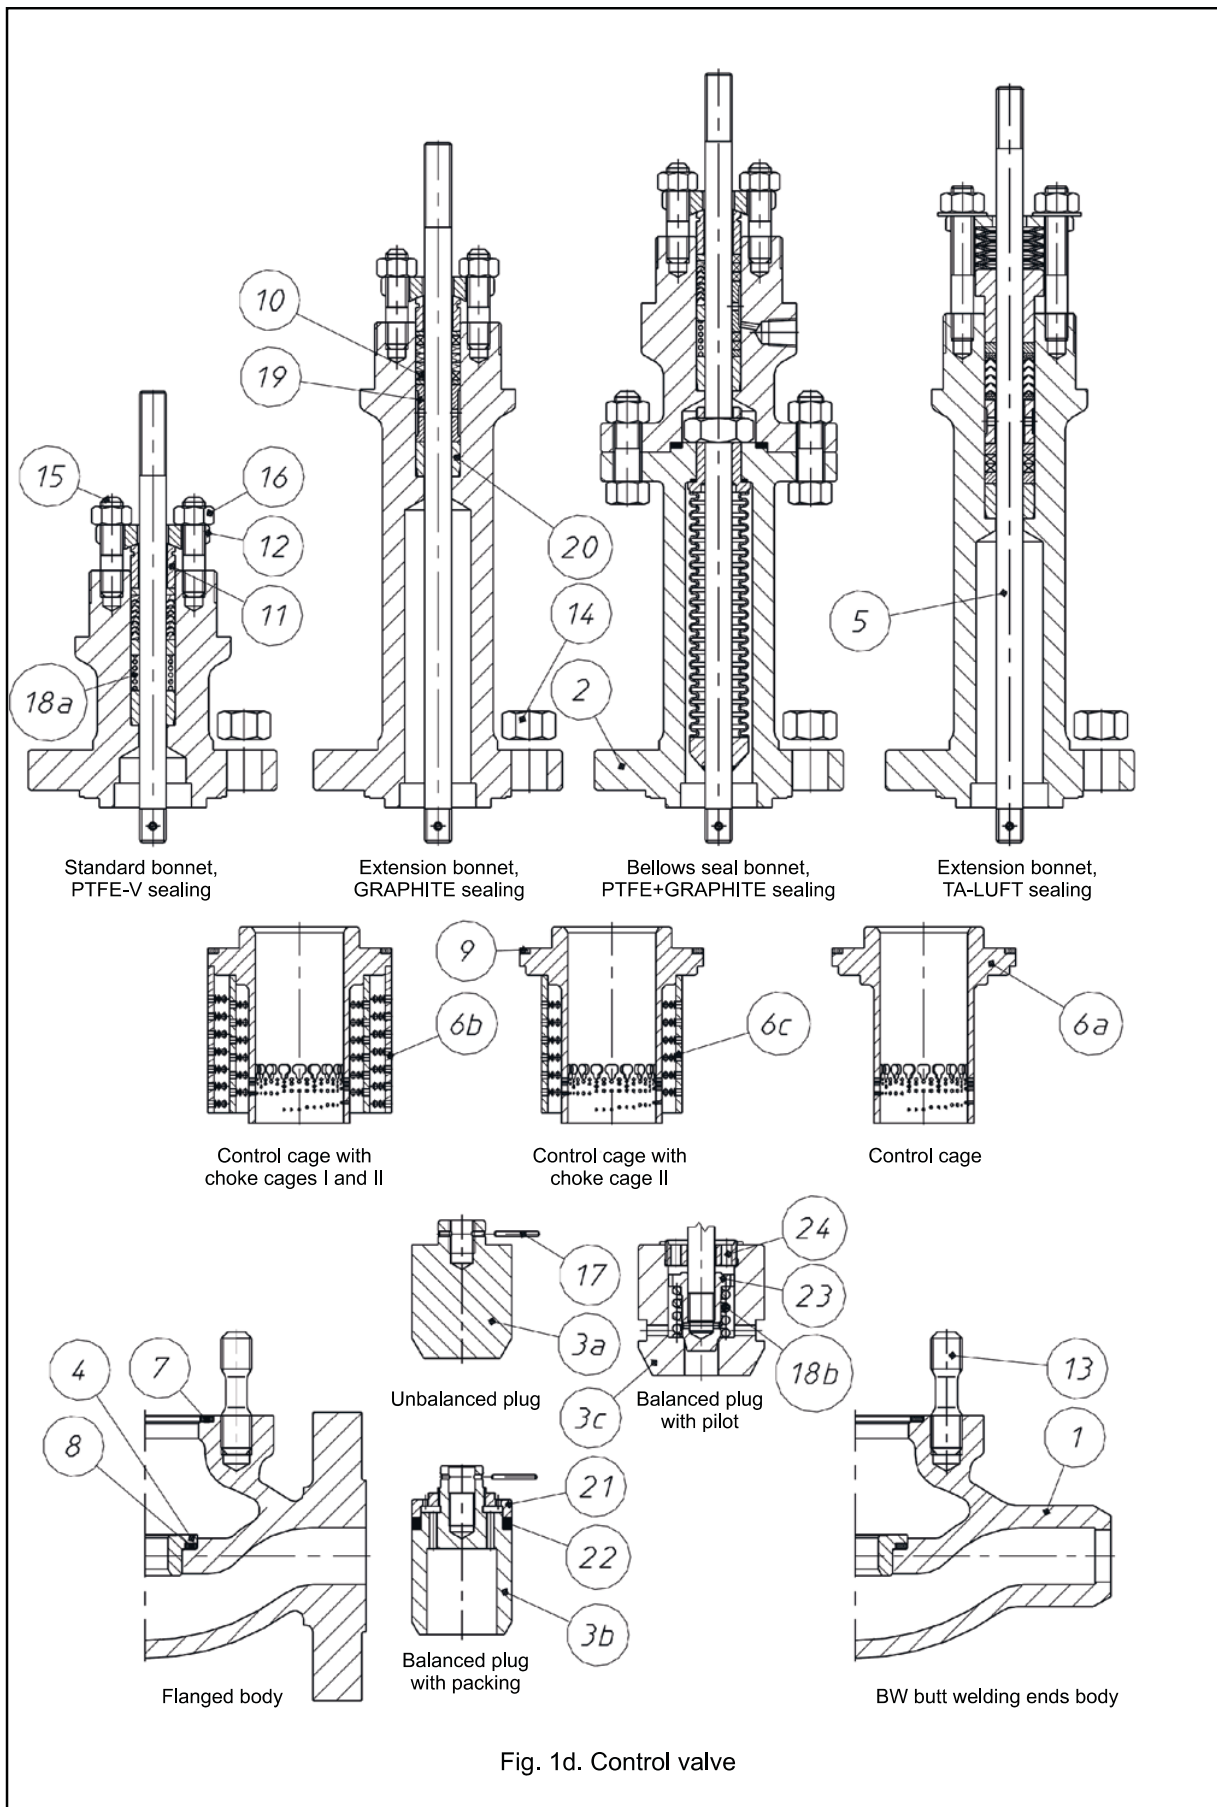

Table 2. Part list with materials.

Note:

*) to be applied for nominal pressures PN10...CL600

Hardening of valve internal surfaces comprises:

- a) stellite – padding of surfaces with stellite: ~40HRC
- b) CrN coating – introducing chromium nitride to external layer of detail, to the depth of ca.0.1 mm:~950HV
- c) heat treatment: valve plug (~45HRC), valve seat (~35HRC), stem (~35HRC), cages (~35HRC), guide sleeve (~45HRC), pilot (~55HRC)

DESIGN

Single-ported globe control valves BR 12B are recommended for application under heavy-duty working conditions, with excessive noise, flashing or choked flow. Selection of designs and materials depends on working conditions. It is based on computer-aided calculations of flow coefficients, noise level, fluid status, and effectiveness of such actions depend on data submitted by customer.

Application of perforated control elements allows noise reduction by 10dBA regarding execution with contoured plug. Further noise reduction (by 5 dBA) can be achieved by application of choke cage, which causes reduction in pressure drop between plug and seat. Such design is also recommended in case of choked flow, cavitation and flashing.

Perforated structures feature higher pressure recovery coefficient FL, which allows achievement of higher flow at same Kvs and Δp as in basic design. Customers shall also appreciate possibility of achieving maximum flow ratio for all nominal sizes and control characteristics, and reduction in actuator costs due to application of balanced plugs. In case of compressive media it is advisable to apply diffusers at the valve outlet. In justified cases (noise, choked flow) diffusers can be fitted with additional perforated choke structures in the form of plates assembled between flanges or welded in diffuser interior.

On customer's request, also when flow conditions justify such solution, special executions are recommended concerning materials, flow ratios, control characteristics, leakage class, etc.

Calculation coefficients:														
FL=0,95 ; XT=0,78; Fd=0,1; xFz=0,75														

Note:1.  - no executions for PN250...CL2500

2. **) – for PN10...50 - K0

3. „K“ – maximum number of choke cages in valve:

K0 – no choke cages

4. The number of choked cages does not concern

K1 – one no choke cage

the valves balanced by a pilot

K2 – two choke cages

**ALLOWABLE PRESSURE DROPS.**

Pressure drops Δp [bar] apply to closed valve and they are calculated with account for the valve drive performance. Actual pressure drops should not exceed 70% of allowable working pressure for given nominal pressure, material execution and working temperature, as per tables 3.1 to 3.7.

$$\Delta p = \frac{10 (F_s - F_D)}{A}$$

where: Δp [MPa] – calculated pressure drop
 F_s [kN] – actuator available force (tab. 6)
 F_D [kN] – valve plug to valve seat pressure (tab. 5)
 A – surface coefficient of seat diameter D [cm²];
 D – seat diameter [mm] (tab. 5)

$$A = \frac{\pi D^2}{400} \text{ [cm}^2\text{]}$$

Note:

1. Valves with balanced plug and with gasket are manufactured only in leakage class IV. For balanced plugs assume the available force of FS at least equal to FD for class V (Table 5).
2. For valves relieved with a remote control, drive disposition forces need to be agreed on with the manufacturer.

Table 6. Available force F_s [kN] of pneumatic actuators

Actuator size	Actuator with direct action P; P1			Actuator with reverse action R					
	Supply pressure [kPa]			Spring range [kPa]					
	140	250	400	20 - 100	40 - 120; 40 - 200	60 - 140	80 - 240	120 - 280	180 - 380
160	0,64	2,4	4,8	0,32	0,64	0,96	1,28	1,92	-
250	1,0	3,8	7,5	0,5	1,0	1,5	2,0	3,0	-
400	1,6	6,0	12,0	0,8	1,6	2,4	3,2	4,8	-
630	2,5	9,5	18,9	1,3	2,5	3,8	5,0	7,6	11,3
R-630T	-	-	-	2,6	5,0	7,6	10,0	15,2	22,6
1000	4,0	15,0	30,0	2,0	4,0	6,0	8,0	12,0	18,0
1500	6,0	22,5	45,0	3,0	6,0	9,0	12,0	18,0	27,0
1500T	12,0	45,0	90,0	6,0	12,0	18,0	24,0	36,0	54,0

Note:

1. For direct action actuators P, P1 adopted spring range is 20 - 100kPa.
2. For electric and other actuators, Δp value can be calculated from the above equation and from the data in tables 5 and 6 with the available force FS provided to be the actuator capacity rating to its catalogue card.

Table 7. Pressure drops Δp [MPa] for valves with pneumatic actuators, seat leakage class IV and V.

Note:

1. In table theoretical acceptable pressure drops are included. Actual pressure drops with consideration of tolerance of spring manufacture and friction of internal parts of the actuator are lower than those given by 20%. Pressure drops chosen that way guarantee internal tightness of closing of the valves.
2. For valves with function "rising control pressure - valve opens" the actuator with springs ranged 40-120 kPa can be replaced with an actuator ranged 40-200 kPa, with the same pressure drops.
3. For reverse-working actuators (type R or R1), supply pressure should be higher than the upper spring range by at least 40kPa.

NOISE REDUCTION

The noise generated out of valve operation caused by cavitations or by aerodynamic effects exceeds the level acceptable by the client, it shall be reduced by means of the following solutions:

- perforated plugs (fig. 1 and tab. 5)
- silencer plates on the valve outlet and/or inside the reduction joint (fig. 3, 4 and tab. 8)
- reduction joints (diffusers) - (fig.4).

Table 8.: Dimensions and flow ratios of silencing plates.

**VALVE ACTUATOR**

• **Pneumatic** – diaphragm multi-spring actuator as per Table 15 type:

- P1/R1 – with cast yoke, no handwheel
- P1B/R1B – with cast yoke, side-mounted handwheel
- P/R – column type, no handwheel
- PN/RN – column type, top-mounted handwheel

Note: P – direct action; air-to-close
R – reverse action; air-to-open

Table 15. Pneumatic actuator types.

Type	Size	Diaphragm effective area [cm ²]	Stroke [mm]	Number of manual actuator turns for full stroke
P/R ; PN/RN	160	160	20	5

1500	410	550		833	120	150
1500T				1138	225	255

**Technical specification of pneumatic actuators**

- control air connections: 1/4" NPT ; Rc 1/2"
- tube diameters: 6x1 ; 8x1 ; 12x1
- spring ranges:

20...100 kPa; 40...120 kPa; 60...140 kPa	- 3 springs
40...200 kPa; 80...240 kPa; 120...280 kPa	- 6 springs
180...380 kPa	- 12 springs

 (not applicable for actuators P/R; P1/R1 - 250; 400)

Note: For actuator P1/R1-3000 (Tandem) – for each range double the above numbers of springs.

- maximum supply pressure: actuator size 160...630 - 600 kPa
actuator size R-630T a 1000...1500T - 500 kPa

Accessories (optional):

- manual drive side-mounted (P1/R1) or top-mounted (P/R)
- pneumatic positioner
- electropneumatic positioner
- smart electropneumatic positioner
- pressure air filter-reductor
- 3/2-way solenoid valve
- lock-up valve
- position transmitter
- limit switches

• **Electric actuators** – electrically operated actuators; electrohydraulic, domestic; imported (detailed technical information - as per the catalogue cards of the actuator manufacturers).

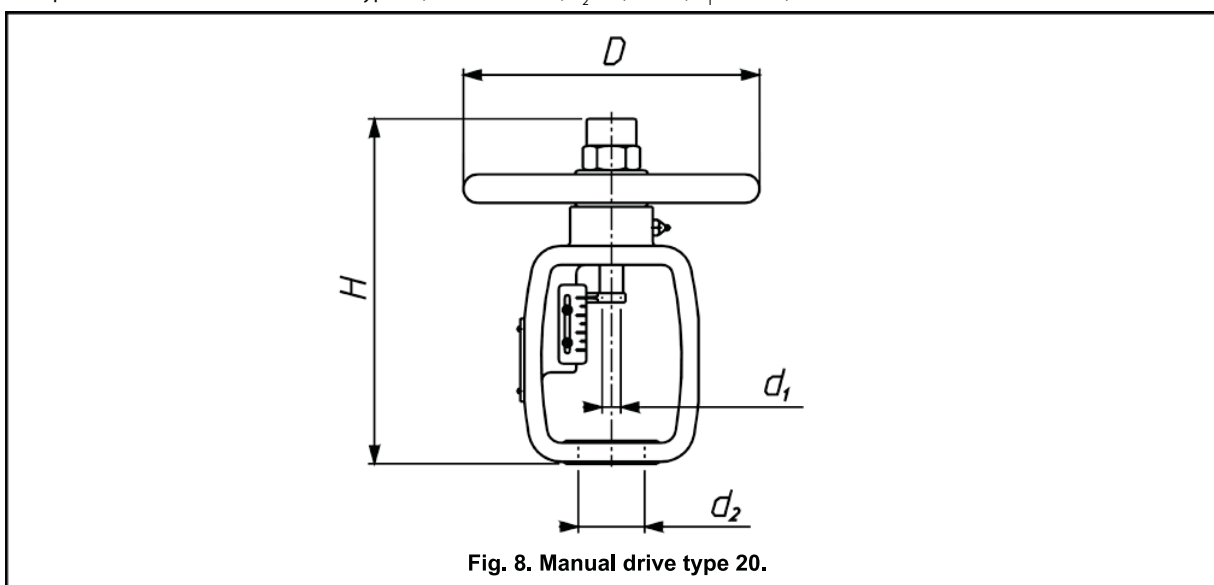

• **Manual drives** – manual drive, type 20, fig.8, tab.18.

**Table 18. Types, dimensions and weight of manual drive type 20.**

Type	Stroke	d_1	d_2	H	D	No of turns for full stroke	Weight [kg]

Marking:

Example: 20-38-57-M16 – Manual drive type 20; stroke - 38mm; $d_2=57,15$ mm; $d_1=M16x1,5$

**SPECIAL OPTIONS**

- **valves for oxygen and hydrogen:**

Application of adequate materials, mechanical and chemical cleaning, inspections and assembly ensure compatibility with oxygen and hydrogen flows.

- **valves for liquid and gaseous fuels with high speed travel:**

Driven by pneumatic actuators with quick closing systems - valve closing time-below 1 sec.

- **valves for cryogenic service:**

Proper materials and special design of the seal to prevent the valve drive from being affected by low temperatures. Used mainly for liquid oxygen and nitrogen.

- **valves for acid gases:**

Parts of valve can be made of materials and under conditions to enable valve operation with gases of H₂S content as per NACE MR-0175.

- **valves with a heating jacket:**

Design and technical parameters-as agreed with the client individually.

- **balanced valves with pilot:**

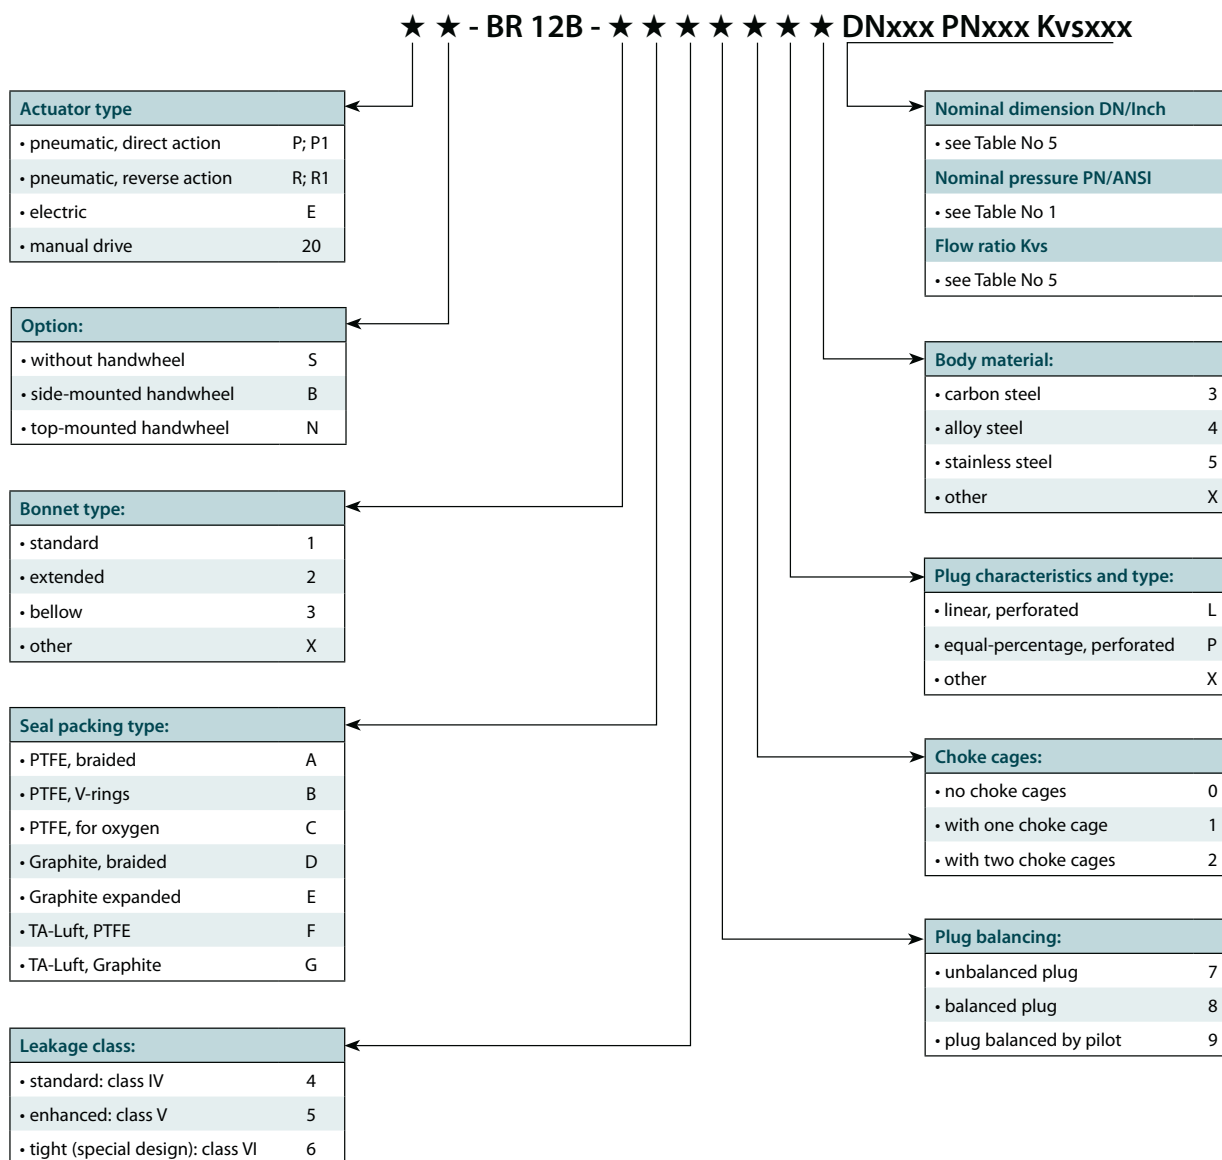

Construction allows achievement of high leakage class at high pressure drops and reduced available force of actuator, flow direction - above the plug.

- **valves with non-cast bodies:**

If a special construction of the valve body is needed, it is possible to design a valve for individual customer's needs (angle valves – type L and Z)

MARKING:

MARKING EXAMPLE:

Control valve series BR 12B with pneumatic actuator (reverse action) with manual drive, extended bonnet. Seal packing by expanded Graphite, leakage class IV, with one choke cage, equal-percentage plug. Body material alloy steel:

RN-BR 12B-2E481P4 DN80 PN250 Kvs63

Valve can be equipped by choke cages: 1, 2 or none - depending on construction allowance of DN and Kvs and based on needs related to valve calculations.

Such marking is shown on valve nameplate..

On the nameplate additionally mentioned:

- maximum working temperature [TS]
- maximum working pressure [PS]
- test pressure [PT]
- plug stroke [H]
- fluid group [1 or 2]
- serial number and year of manufacture
